

SMART DESIGNS COME FROM SMART SOLUTIONS.

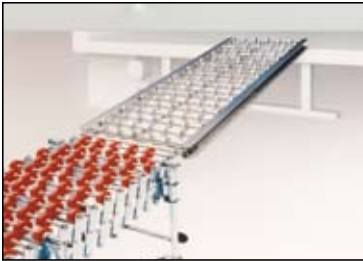

FLEXIBLE CONVEYOR OPTIONS

Herringbone Transition centers product onto your flexible conveyor, while **floor mounted guide track** guides your conveyor under the decline to insure proper storage.

Stainless Steel conveyors aid in flexible solutions in wash down and food applications.

The **Swing Stick** option allows you to bridge uneven gaps or aid in dockless receiving applications.

The **Powered Assist** unit is the most mobile drive unit on the market, aiding workers in moving your flexible systems.

Heavy Duty Impact Carts take the daily abuse of impact loading, extend the life of your conveyor and reduces maintenance issues.

T-Junctions use multi-directional skate wheels so you can manually sort product to a variety of locations while keeping your flexibility.

Various Skate Wheel options along with **Flexible Side Guides** give you additional options for customizing your conveyors and give you added product control.

Rigid Discharge Carts keep the end of your conveyor in a fixed position, making it easier to handle product in your loading applications.
